TardFi offers a seamless way for users on Base to accumulate blue chips like whales by simply buying and holding \$TARDFI, and not fomo-ing like tards.

This is facilitated through proprietary AI models, which automatically allocates fund capital to meme coins with positive price action, and a number of relevant factors including whale wallet tracking & KOL groups.

Our tech seamlessly accumulates and airdrops to our holders the tokens you would otherwise fomo into through selling low cap gems.

Dont be a tard, be a Tard Financier.
